

Lightning strikes account for over a third of computer failures in Australia

With this startling number in mind it makes sense to protect yourself from lightning strikes using state of the art lightning surge protection devices and uninterruptible power systems.

Uninterruptible Power Supplies from Powershield will keep your equipment running even when the power fails completely. Surge filters from Zapguard and Zapcatcher offer simple but effective plug-in surge protection and LDU provides World Class direct strike lightning protection together with hard-wired surge diverters and filters capable of protecting everything from a domestic dwelling to entire Industrial Complexes.

It is not only computer equipment that can be damaged by power disturbances and extreme weather conditions, home theatre systems, telephone & security equipment and industrial control systems are all vulnerable. Queensland Power Protection offers tailor-made protection solutions for each of these systems.

Queensland Power Protection is a leading supplier of secure power products. With over 20 years experience we offer professional advice, first class products and consultation services which include power quality testing and secure power planning.

So, no matter if you need inexpensive protection for your home computer or if you require a comprehensive secure power system including auto-start generator, whole of enterprise surge protection and uninterruptible power supplies, you can depend on Queensland Power Protection to provide timely solutions tailored to suit your precise needs.

Below are some of the products we supply.

Uninterruptible Power Supplies

Using an [uninterruptible power supply](#) in Australia makes sense. We're one of the most storm prone countries on the planet and have extremes in weather patterns and storm cycles. If you're looking for an uninterruptible power supply price please call us on 1300 795 160 to find out how we can assist your business in creating a safe and dependable environment for your electrical goods. Uninterrupted power supplies are our specialty, so call us today on 1300 795 160.

Plug in Surge Protectors

QLD Power Protection can supply a range of different surge protection options ranging from [home surge protection](#)

to [whole-house surge protection](#). Many people realise that electrical equipment is prone to spikes in power supply leading to outages and damage. What most people don't realise is that your electrical equipment is being damaged slowly and relentlessly by electricity and an electronic device with a good quality power filter will typically outlast one without by a factor of two to one.

Hard Wired Surge Protectors

If you're looking for a [commercial / industrial surge protection system](#) or [building surge protection](#) for lightning and electricity spikes, then looking into our hard-wired surge protectors is an option. Causes of power surges are many and varied, ranging from lightning strikes to cars crashing into power poles and on a smaller scale the use of high powered devices like elevators and air-conditioning units.

There are many reasons people look into surge protectors, for example:- surge protectors for TVs surge protectors for computers surge protectors for appliances surge protectors for refrigerators surge protectors for RV surge protectors for home surge protectors for laptops surge protectors for house surge protectors for electrical panels

Inverters

[Inverters](#) are a great option if you wish to use power for a range of different units that need electricity from various sources like a car plug or solar or wind powered generator.

We have two types of inverters available at QLD Power Protection. A 200W and 4000W model which will cover the expanse of most people's requirements.

People use inverters for a range of different reasons, for example:- inverters for solar panels inverters for cars inverters for laptops inverters for caravans inverters for boats inverters for solar system inverters for RVs inverters for home inverters for solar power

Generators

Qld Power Protection stocks state of the art [Brisbane generators](#) for a range of different uses. Depending on your usage we can quote on the type and size of generator you require. Many people are looking for a generator for home use or generators for sale in Brisbane. If you're after a generator for a boat or a generator for a caravan then please call us today on 1300 795 160. Telephone Line Surge Protectors Protecting your telephone and data lines from surges is essential if your business relies on the phone and internet (what business doesn't these days!) to conduct transactions, emails and conversations online and via the phone. Telephone surge protectors give you peace of mind that your data lines and phone lines are safe and secure with our LAN filters, Network protection services and line protectors.

Lightning Rods and Direct Strike Lightning Protection

If you're looking for [lightning rod protection](#) and lightning protection products, then our Direct Strike Lightning Protection systems can be used to protect structures against direct lightning strikes.

Whilst our systems are technically a lightning rod they are a much more advanced version system called an Early Streamer Emission Terminal.

Queensland Power Protection can help you - call us today on 1300 795 160.
